JUAN MANUEL IBÁÑEZ

Frontend Engineer | React | TypeScript | Accessibility | AI-Assisted Development
Buenos Aires Province, Argentina (GMT-3) | Remote | English: Professional working proficiency
Email: jmiban@gmail.com | Phone: +54 9 11 5421-9655
LinkedIn: linkedin.com/in/juanmanuelibanez | GitHub: https://github.com/jmibann

PROFESSIONAL SUMMARY

Frontend Engineer with 7+ years building React/TypeScript products for US and European clients across healthtech, e-commerce and travel. At Making Sense (client: Vetsource), owned payment, compliance and analytics features end-to-end, drove the design-system and Vite migrations, and led code reviews focused on type safety and hook correctness. Track record building multi-brand component architectures (5 Gap Inc. brands, 3 branded mobile apps). Electronics Engineer (UTN) + MBA with a medical-technology background, now building agentic AI workflows with the Claude API and MCP.

TECH STACK / CORE COMPETENCIES

Languages: JavaScript (ES6+), TypeScript (strict mode), Python (fundamentals), SQL

Frontend & UI: React (incl. React 19), Vite, Redux, Zustand, React Query, WebSockets (Socket.io), Context API, Custom Hooks, Material UI, Tailwind CSS, CSS Modules, Formik, Yup, Internal Design Systems (Kibble), Design Tokens, Theming (Light/Dark Mode), Internationalization (i18n), Responsive / Mobile-First Design, Chart/Data-Visualization Libraries

Accessibility: WCAG, WAI-ARIA (tabs, disclosure, dialog patterns), Keyboard Navigation & Focus Management, Semantic HTML, axe-core

Full-Stack Foundations: Node.js, Express, MongoDB, PostgreSQL

Testing & Quality: Jest, Vitest, React Testing Library, Playwright (E2E), user-event, jsdom, Unit & Integration Testing, Test-Driven Development (TDD), Automated Accessibility Testing, ESLint, typescript-eslint, Quality Gates

AI & Agentic Engineering: Claude API/SDK (Python & TypeScript), Multi-Agent Orchestration, Tool Calling, Model Context Protocol (MCP), Context Engineering, Human-in-the-Loop Workflows, Claude Code

Tooling & Practices: Docker, Git, GitLab, Datadog, Conventional Commits, Architecture Decision Records (ADRs), SOLID Principles, Functional Programming, Agile/Scrum

PROFESSIONAL EXPERIENCE

Frontend Developer — Making Sense LLC *10/2023 – 07/2026 · 2 yrs 10 mos*

Remote, Argentina · Client: Vetsource — US veterinary-supply platform serving clinics nationwide

- Owned the frontend for a major US bank's ACH integration and in-clinic card payments: real-time account validation over WebSockets, a reusable error handler, card-reader input parsing with debounce and checksum validation, and failed-payment retry flows, covered by Playwright E2E tests.
- Built the Analytics & Reports module end-to-end behind a feature flag (custom data hook, category filters, pinned "most visited" reports), plus a public Recommendation History page with CSV export and PNG chart download.
- Delivered veterinary compliance and order-management flows: approve/deny review queue with license display, PIN/token-based vet login, controlled-substance warnings with signature capture, and order and autoship editing.
- Drove platform modernization: progressive MUI → Kibble design-system migration, Vite migration, Datadog timing metrics, and an expanded unit + E2E test base, stabilizing flaky suites.
- Led code reviews focused on type safety and hook correctness, and audited a large-scale i18n migration generated by another team's AI agentic pipeline (Gemini), catching non-localized API text and locale-dependent error handling.

React Developer (Contractor) — Konexio *03/2023 – 10/2023 · 8 mos*

Remote, Argentina · Client: lastminute.com — European online travel & tourism group

- Refactored legacy React/TypeScript UI components as part of a major UX/UI redesign of the booking platform, preserving functional parity throughout the modernization.
- Collaborated with a distributed engineering team across multiple time zones.

Frontend Developer — Nisum Latam *07/2021 – 03/2023 · 1 yr 9 mos*

Remote, Argentina · Client: Gap Inc. — US apparel retailer (Gap, Gap Factory, Old Navy, Banana Republic, Athleta)

- Refactored and enhanced reusable React/TypeScript UI components in a shared component library serving five e-commerce brands.

- Implemented brand-specific UI variants while keeping design patterns, reusability and architecture consistent across platforms.
- Presented feature demos to client teams in Agile ceremonies, clarifying design requirements, validating UI behavior and incorporating stakeholder feedback.
- Applied component testing with Enzyme and React Testing Library to validate UI behavior and support refactoring.

Frontend Developer — Mobomo *10/2020 – 07/2021 · 10 mos*

Remote, Argentina · Client: Apogee — managed network & Wi-Fi services provider for US universities

- Built the web MVP from scratch with React, TypeScript, Tailwind CSS and React Query, contributing to stack selection, project architecture and reusable component foundations for a student self-service platform (accounts, device registration, connectivity, support).
- Defined API contracts and mock-data strategies with the React Native and Ruby on Rails teams, letting web, mobile and backend develop in parallel against shared integration patterns.
- Aligned technical decisions and cross-team dependencies directly with the client's Technical Lead in daily Agile ceremonies.
- Continued post-MVP development for 7 months and supported knowledge transfer to the incoming engineering team.

Full Stack Developer — Endava *01/2019 – 10/2020 · 1 yr 10 mos*

Buenos Aires, Argentina

Project: Internal Talent Platform (01/2019 – 08/2019)

- Delivered end-to-end features (React + Node.js) for Endava's internal recruiting platform: candidate profiles, interview tracking, internal CVs and scoring.

Client: ACAP Health Consulting — Joyages (08/2019 – 10/2020) · US digital mental-health platform

- Built a cross-platform React Native app from scratch, designing a shared component architecture that powered 3 branded apps (Joyages, Hard Hat and a first-responder platform), each with its own UI/UX.
- Migrated the app from Expo to the bare workflow to support push notifications, third-party native libraries, and custom versioning and deployment requirements.
- Partnered with native iOS/Android and .NET backend teams and QA to plan migrations, standardize development practices, and ship features and fixes across the app portfolio.

PROJECTS

AI-Built Bilingual Portfolio · https://github.com/jmibann/cv-agentic *07/2026 – Present*

Designed a 5-agent development system (Claude API, MCP, OpenCode) that delivered a React 19 / TypeScript / Vite site via spec- and test-driven development: 24 WCAG-compliant components, 445 tests with axe-core audits, human-in-the-loop gates and automated visual QA via Chrome DevTools MCP.

ADDITIONAL EXPERIENCE — ENGINEERING & MEDICAL TECHNOLOGY

Field Service Engineer — Philips Healthcare (10/2015 – 06/2018): maintenance and troubleshooting of radiography, fluoroscopy and angiography systems; official Philips training in Santiago, Chile.

Junior Maintenance Engineer — Vidt Centro Médico (02/2015 – 09/2015): maintenance of Varian linear accelerators; coordinated a Varian Trilogy System installation.

Regulations Engineer — Hewlett-Packard (07/2013 – 02/2015): international product certifications (UL, TÜV Rheinland, IRAM, S-Mark, Intertek) across Argentina and Chile.

EDUCATION

Engineer's Degree in Electronics Engineering — Universidad Tecnológica Nacional (UTN) — 2014

Research on nonlinear dynamical systems (Chua oscillator) in MATLAB and C, resulting in a publication. Member of GDAIA (autonomous agents research group).

Master of Business Administration (MBA) — Universidad Argentina de la Empresa (UADE) — 2016 – 2018

Full Stack Developer, JavaScript — Plataforma 5 (Coding Bootcamp) — 2018

600+ hour immersive program: React, Redux, Node.js/Express, PostgreSQL, MongoDB, TDD, RESTful APIs, Scrum; capstone practicum at Endava.

Certifications — Anthropic (2025–2026): Building with the Claude API · MCP: Advanced Topics · Claude Code in Action · Introduction to Subagents · Introduction to Agent Skills (+5 more)
